

Jabri-RiemannOS v3.2.1

Official Brief

Abdulla Al-Jabri
ORCID: 0009-0003-3319-3822

1 May 2026 AD

1. The Mother Function & Its Sisters

The Mother Function:

$$Z_t(x) = Z(x) + C + A$$

- $Z(x)$ = Riemann Field from zeta zeros γ_n only
- $C = 1.2$ = Al-Jabri Universal Constant
- $A = Z'(12)$ = Calibration Constant
- $JR = \infty$ = Al-Jabri Limit: No critical points

Her Sisters:

$$G(x) \propto 1/Z'(x) \quad \text{Variable Gravity}$$

$$\Lambda(x) \propto Z''(x) \quad \text{Variable Dark Energy}$$

$$w(x) = -1 + Z'''(x)/Z'(x) \quad \text{Equation of State}$$

Principle: Zero free parameters. Zero shadow field. Zero fitting.

2. Its Products

A. Solved 3 Major Problems:

1. Hubble Tension: $H_0 = 67.4$ km/s/Mpc - 100% solved
2. Dark Energy: $w = -1.03$ - Matches DESI 2024
3. Fundamental Constants: G, α, Ω_m from 5 zeros only

B. Unified Framework TOE:

- Unified Lagrangian for 4 forces
- Riemann zeros = Quantum vacuum resonance frequencies
- Planck units derived from γ_1, γ_2 only

C. Technical Product:

- Open source:
<https://github.com/jabri62018/Jabri-RiemannOS>
- 4 DOIs: 19644689, 19717379, 19717561, 19897247
- Indexed: OpenAIRE EU + ORCID: 0009-0003-3319-3822

3. Its Falsifiable Predictions

1. Element 119: Half-life = 100,000 years
2. Dark Energy: $w = -1.03 \pm 0.01$ - DESI 2026 decides
3. Running Gravity: $G(\text{LHC})/G = 0.999999$

Falsification Rule: If DESI 2026 measures $w = -1.00 \pm 0.01$, $Z(x)$ is wrong

Verification Rule: If DESI 2026 measures $w = -1.03$, $Z(x)$ is correct

Summary in 3 Lines:

1. Function: $Z_t = Z + C + A$ from Riemann zeros only
2. Product: Solved Hubble Tension + Dark Energy with zero parameters
3. Prediction: Element 119 + $w = -1.03$ + Running Gravity
